

TOLL PROCESSING

Large Batch Production

Inventory Management

Pilot Plant Testing

Custom Milling and Consulting LLC provides toll processing services that help you fill a production shortfall or launch a new product. We are there for you at our 70,000 sq. ft. facility in Fleetwood, PA.

CMC offers flexibility in production levels from small to large batches. We can coordinate every step of the process for you, from procurement of raw materials, to production, to packaging and labeling, to shipment. Your success matters to us, so we will work directly with you to ensure that even the most stringent production specifications are met.

With over 30 years experience in processing particles in a liquid or slurry, CMC has the ability and expertise to handle your small, mid-size and large scale production requirements.

In our Pilot Plant, CMC will test your formulas and help you bring products to market very quickly. We can help optimize your process and scale up to production quantities with high accuracy. Batch sizes from 1-200 gallons can be produced in a controlled environment.
